Let's Talk LASER THERAPY

Q WHAT MAKES LASER THERAPY SO EFFECTIVE?

There are many different reasons why the Cutting Edge MLS Laser is effective in managing pain. This laser has two different wave lengths, 808 nm and 905 nm. The first wave length works on reducing inflammation and the other works on reducing pain. These cause an increase in circulation by helping to form new blood vessels, thus reducing swelling and inflammation and speeding up healing. Laser light also stimulates fibroblasts, the building blocks of collagen, which is needed to repair tissue injuries.

DR. HARVEY DANCIGER

Dr. Harvey R. Danciger's practice is founded on three basic principles: trust, caring and a commitment to excellence in podiatry.

We view each patient as an individual. We view our relationship with our patients as a sacred trust and work hard everyday to deserve that trust. Patients come first!

Q HOW DOES LASER THERAPY **A** HELP MY HEEL PAIN?

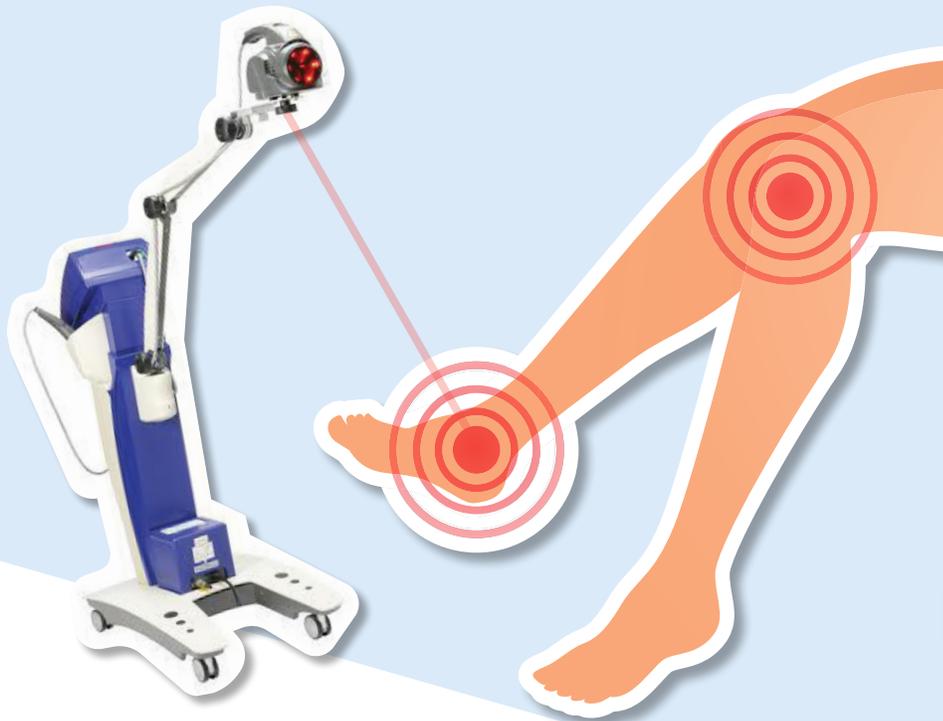

Heel pain can develop due to strain on your foot or an injury such as plantar fasciitis. With laser treatment, a light beam is targeted directly on the affected tissue. The laser helps to:

- Reduce pain and inflammation
- Accelerates tissue repair
- Reduces scar tissue
- Closes wounds
- Improves nerve function

There is no pain or discomfort during or after the procedure. It may take three to four treatments before a decrease of symptoms are fully felt, however most patients feel a difference after the first or second treatment. Six treatments are needed.

Q WHAT CAN I EXPECT **A** OUT OF THIS THERAPY?

Laser therapy can be a valuable recovery tool for sufferers of virtually any foot condition that involves swelling or pain, including arthritis. Treatment is entirely pain free and takes place in our office. Sessions are brief—in most cases, just five to 10 minutes. Depending on your specific condition and whether the pain is acute or chronic, a treatment series may last an average of six to 10 sessions in total.

Although each case is different, if you're like most patients you will begin to notice significant improvement after just a few therapy sessions—even in as little as one to three appointments. Since the treatments are cumulative, you should continue to feel better and better after each appointment. When combined with traditional rehab strategies, laser therapy can dramatically improve even the most stubborn foot pain in a relatively short period of time.
